

Midwest Video Solutions Selects Net Insight for Trans-Pacific VideoTransmission to US Military Bases

Digital TV service provider relies on Net Insight's Nimbra to Deliver Trans-Pacific Virtual Headend Service to Soldiers Stationed in Japan

9 November 2009

ORLANDO, Florida – Net Insight, a leading developer of efficient and scalable optical transport solutions for media, IP and broadcast networks, today announced that it has supplied Nimbra switches to Midwest Video Solutions (“MVS”), a leading provider of robust Digital TV solutions, to provide a virtual head end feed from their facilities in Westby, Wisconsin to a US military base in Japan.

Net Insight delivers 100 percent Quality of Service, allowing customers to transport any service to any network location without packet loss. The optimized Nimbra platform meets the needs of broadcasters, media networks, IPTV/CATV operators, Metro Ethernet and telecom operators in a one-system solution. Head end operators can use the Nimbra platform to form virtual head end services with scalable layer-2 multicast and no packet loss.

"The Nimbra platform has significantly reduced bit error rates in our service, allowing us to deliver a pristine IPTV service half way around the world," says Marty Snustead, Executive Director of MVS. "We are currently using Net Insight's solution as part of our statewide Digital TV service for local communications providers in Wisconsin, and recently made the decision to use the Nimbra 360 to provide our service to a key customer in Japan."

"We are very pleased to have MVS as a partner for the IPTV market," says Fredrik Trägårdh, CEO of Net Insight. "Combining extensive content, uncompromising network transport quality, and first-class customer service is what local communications providers seek when looking to offer IPTV services to their customers."

Net Insight and MVS will be onsite at TelcoTV (Booth #1039) in Orlando, Florida from November 10-12 with product displays and service demos. For more information, visit: www.netinsight.net
